

Web Based ERP Solution Project

The Client: A Major Aviation Fuel Services Joint Venture Company

The Challenges:

- Most of the information on day to day activities at the Client place, is either stored in paper documents or Excel sheets.
- As the operations have expanded significantly, it has become difficult to manage the information manually

The Need: An Enterprise wide system was needed for easy management of all operational information

The Solution:

- Invenger developed a Web based ERP solution for the client
- Easy capturing of the operational information
- Data import option was provided for importing historical data.
- Various types of reports were built in to assist in critical decision making.

The Benefits:

- Reduce the burden of manual calculations
- Interlink information for better consistency and to reduce errors
- Helps user in detailed analysis of raw/stored data
- Automated most of the manual processes
- Email/SMS alerts provided for critical events
